

The period of most intense brain development
 The first trimester of pregnancy (specifically weeks 5–12 / months 2–3)
 During this period:
 The neural tube closes (around the 5th week)
 The foundations of brain regions are formed
 Neuron production (neurogenesis) is very rapid
 Cerebrospinal fluid is formed
 The first brain waves begin to appear

Second period of rapid growth
 2nd trimester (weeks 13–28 / months 4–6)
 During this period:
 Billions of neurons are produced
 Synapse (connection) formation accelerates
 Brain folds and lobes become distinct

Since the planetary alignment occurred at the right time, it had a very positive effect on brain formation during the fetal stage.

TYPES OF HANDICRAFTS DONE DURING PREGNANCY

Quilt making

Knitting slippers

Hoop-edge lace

Lace making

Clothing making,

Embroidery

Patterned vest knitting

During pregnancy, the mother engaged in a wide variety of handicrafts, thereby shaping the fetus's brain neuronal connections in a highly positive and beneficial way.

Primary School

Middle School

Vocational High School – Creating technical drawings of continuously operating mechanisms honed my mind to understand and perceive the universal system that governs neuronal connections.

Vocational School – Mechanical Drafting, likewise

Open University – Business Administration – Financial training, business structure training

Together

Professional career – various machinery manufacturing roles over a 10-year period

Read 1,000 books on essential topics such as personal development, science, history, the workings of the universe, etc.

Watched 1,000 documentaries on essential topics such as personal development, science, history, the workings of the universe, etc.

Practiced the "Zorlu" writing method gradually over the course of 20 years.

Writing the same positive adjectives with both hands, and writing different positive adjectives simultaneously with the right and left hands.

Müthişleştirebilirliğimizi

Teknikleştirebilmeliydim

Modernleştirebilirliğinden

Legalleştirebileceğinizden

It improved gene quality and the rate of cell regeneration. Because I wrote down positive adjectives, it established connections between brain neurons associated with those positive qualities. I wrote down 400 of them. I need to go through another 900 positive adjective:
